

■■ ForenSOC: The Student's Guide

Advanced Cybersecurity & Digital Forensics Made Simple

1. What is ForenSOC?

Think of ForenSOC as a **Super-Powered Digital Detective Agency**. In the digital world, hackers leave 'footprints' in files called Logs. ForenSOC is the tool that automatically finds those footprints, analyzes them, and tells you exactly what happened.

2. Cool Features You Can Use

Feature	Simple Explanation
Live Collector	Automatically watches your own PC for threats while you work.
Auto-Ingest	A 'Magic Folder' where you drop log files for instant analysis.
Smart Analyst	Explains scary technical alerts in plain English.
Forensic Vault	Securely saves evidence like a police locker.
Incident Timeline	A storybook view of exactly when an attack happened.

3. How to Use It (Step-by-Step)

- **Step 1: Start the Engines.** Double-click the *run-forensoc.bat* file. Three windows will open. Don't close them!
- **Step 2: Log In.** Open your browser to *http://localhost:3000*. Use 'admin' for both username and password.
- **Step 3: Watch the Live Feed.** Your computer is already sending data! Go to the *Timeline* tab to see your PC's activity.
- **Step 4: Test the Magic.** Drag any log file into the *backend/ingest_drop/* folder and watch the Dashboard update instantly.
- **Step 5: Get the Proof.** Click *Generate Report* to get a professional PDF file of your findings.

4. Using It Anywhere

On Windows: Use the .bat file. It handles everything for you automatically.

On Linux/Mac: Use the terminal. Run `uvicorn app.main:app` for the backend and `npm run dev` for the frontend.

In Virtual Machines (VMs): Simply enable 'Shared Folders' and drop any logs from your VM into the `ingest_drop` folder on your main PC.

Welcome to the world of Digital Forensics. Happy Investigating!
